PIC MICROCONTROLLER APPLICATIONS GUIDE FROM

SQUARE 1

INTRODUCTION 1

8-PIN MICROCONTROLLERS - PIC12C508 2

PIC12C508 pins and functions 2
Packages 4
Clock oscillator 4
Configuration bits 5
Reset 5
Port 5
GPIO register 6
TRIS register 6
Architecture 7
- Program memory 7
- File registers 7
- Stack 8
- Reset vector 8
- OSCCAL calibration constant 8
  - Internal clock applications 10
  - External clock applications 11
- OSCCAL considerations and rules restated 11
- Program counter 12
- Option register 13
- Status register 14

Timing and counting 15
PIC12C508 programming example - internal clock 15
PIC12C508 programming example - external clock 17

TEST EQUIPMENT FOR TIMING AND COUNTING EXPERIMENTS 20

Test equipment for detecting a short single pulse and measuring it's width 20
Pulse generator - 32 microseconds 26
Pulse generator - 128 microseconds 27
Pulse generator - 2000 microseconds 27
Pulse generator - 65280 microseconds 30
Test equipment for generating a frequency output 33

USING TIMER 1, TIMER 2 AND THE CAPTURE/COMPARE/PWM (CCP) MODULE 36

PIC16C63 test circuit 37
Before we take off 41
TMR2: 8-bit timer 42
- TMR2 description 42
- How to choose/select mode of operation 43
- Interrupts 43
- TMR2 applications 44
  - Free running mode (via TMR2 interrupt) 44
  - Free running mode (via period register) 48

TMR1: 16-bit timer/counter and capture/compare module 52
- TMR1/CCP module simplified 52
- TMR1 description 54
- CCP module - capture mode 56
- CCP module - compare mode 57
- CCP module - PWM mode 57
- CCP1 pin 58
- How to choose/select mode of operation 58
  - T1CON register
  - CCP1CON register
- Interrupts 59
- Reading and writing TMR1 59
- Long time intervals 60
- Controlling the CCP1 pin in compare mode 60
- More than one way to do timing stuff 61

Timing and counting experiments 62
- Free running output (via TMR1 interrupt) 62
- Event counting (via TMR1) 66
  - Count events, read TMR1 contents 66
  - Capture TMR1 count when external event occurs 69
  - Count events up to predetermined number and generate an output (compare) 73

Single time interval output (via TMR1 and CCP, compare mode) 77
Start TMR1, auto end 77
500 milliseconds 77
128 microseconds 81
Free running output (via TMR1 and CCP, compare mode) 83
Clear TMR1 each cycle 83
Free running TMR1, add interval value to compare register each cycle 87
Time measurement (period/interval/time between events) (via TMR1 read) (interval input via port pin) 92
(via TMR1 and CCP, capture mode) (interval input via CCP1 pin, two captures, subtract) 97
Frequency measurement (via TMR1, gate via TMR0) 103
External 32,768 Hz watch crystal-based clock - TMR1 109
Pulse width modulation (PWM) using TMR2 and the CCP module 117
Analog output - increase/decrease buttons - PWM - 8-bit mode 121
Duty cycle - 10-bit mode 126
Analog output - increase/decrease buttons - PWM - 10-bit mode 134

DESIGNING AND BUILDING YOUR OWN TEST EQUIPMENT 140

Keypad/LCD user interface 140
5-digit decimal to 16-bit binary entry program 142
Using the 5-digit decimal to 16-bit binary entry program 152
Digital pulse generator 153
Digital frequency generator 164
Time interval measurement instrument 176
Frequency measurement instrument 189
Creating your own combination signal generator and measurement instrument 200

TALKING TO A PIC16 WITH A PC VIA A TERMINAL PROGRAM 201

"U-turn" experiment 202
PC-to-PC "2-lane highway" experiment 205
Importing a text file into a spreadsheet program 207
Windows 3.x 207
Windows 95 210

PC/PIC 213
PC baud rates 213
Modify ser_out subroutine 214
Modify ser_in subroutine 218
PIC to PIC at 4800 baud, LSB first 221
RS-232 interface for PIC16 224
RS-232 converter circuit using MAX233 224
PC to PIC serial communication 226
Display one ASCII character via 8 LEDs 226
PIC to PC serial communication 227
Send one ASCII character 227
Code for formatting PIC16 data on a PC screen 228
Sending a text file 231
PC to PIC/LCD 233
Control characters 234
Sending a text file (control characters and data) 240

SIMPLE DIGITAL VOLTMETER EXPERIMENT 242

SIMPLE DATA LOGGER EXPERIMENT 253

Main program 255
Data logging 256
Display data sequentially via LCD 259
Uploading data to a PC 260
Code 261
Operating procedure 278
Spreadsheet and graphing data - Windows 3.x 280
Spreadsheet and graphing data - Windows 95 284

APPENDIX A - Program listings vs. page number 287

APPENDIX B - PIC16C63 control registers 288

APPENDIX C - '84 on a board 295

APPENDIX D - PIC/LCD schematic and code 297

APPENDIX E - Keypad 309

APPENDIX F - Sources 311
